

Travel Medicine Process

INQUIRY

- Please complete our travel questionnaire for each person travelling. There is an online or hard copy form available.
- Once received we will contact you to arrange your travel consultation. This gives our travel clinicians enough time to prepare information specific to your travel itinerary
- Please see travel medicine fees for our travel clinic costs

BOOKING

- Our Travel Clinicians are Dr Mark Taylor, Dr Meredith Riddle and Nurse Karen
- Where possible please contact us two months prior to your travel departure date, this is to provide enough time for you to attend your consult and receive your vaccines
- Consultation times will vary depending on the number of people in your family - you can discuss this with our team when booking
- Please allow for an additional 30 minutes after the travel consult to receive vaccines

CONSULT

- During your travel consult the clinician will discuss your travel itinerary, health information specific to your destination, any lab tests required, recommended vaccines including costs and make any other travel related recommendations

VACCINES

- You will usually receive your first series of travel vaccines (some vaccines require two doses) on the same day as the travel consult unless they are specialised vaccines that we need to order in
- You will need to wait 20 minutes post vaccination for monitoring
- You will be provided with appropriate brochures and advice
